

# YAROSLAV TKACHENKO

Vancouver, BC | 604-230-8734 | [sapiensy@gmail.com](mailto:sapiensy@gmail.com) | [sap1ens.com](http://sap1ens.com)

## Skills

Highly scalable and available service-oriented applications with **Scala**, **Java**, **Python** and **Node.js** stacks. Everything between API and infrastructure levels: starting from basic modelling and design, Domain-Driven back-end implementation (functional, OOP, actors), messaging, caching, background jobs, persistence with RDBMS and NoSQL, etc. to complex stateful cluster services, microservices, event sourcing, stream and batch processing. Big interest in **data pipelines** and **Big Data**.

Reliable reproducible **infrastructure-as-code** and **automation**. **Containers**. Twelve-Factor App adoration and **DevOps** excellence. Test automation junky.

## Experience

### Activision

**Senior Data Engineer** / March 2018 - Present / Vancouver, Canada

**Senior Software Engineer at Demonware** / May 2017 – March 2018 / Vancouver, Canada

Started in the Data Pipeline team, then transitioned to the Data Services team.

Working on a Big Data platform for Activision games (primarily Call of Duty), consisting from an ingestion layer (Python), a large-scale data pipeline (Kafka), ETL (Hadoop, Spark, Scala), stream processing (Kafka Streams), Data Lake / Warehouse (S3, Hive, Presto, Redshift) and various related services and APIs (Python, Java), leveraging a wide range of formats (Avro, Parquet, ORC, Protobuf, proprietary ones). Infrastructure is deployed in AWS: EC2 (Docker, Ansible, Terraform), DC/OS (Mesos), Qubole and EMR.

### Mobify

**Senior Software Engineer, Lead** / November 2016 - May 2017 / Vancouver, Canada

Led the new Platform team, responsible for core Platform services like demo environments, content delivery, platform generator, location services and more. Heavily used Node.js, Python, Redis, Docker, AWS and Heroku.

Tried to invert the Conway's law and build unified Platform from a set of diverse products.

Designed and implemented first AMP (Accelerated Mobile Pages) prototype (ES6, Node.js, Redis).

Contributed to the realtime data pipeline (Scala, Kafka, Flink) and Progressive Mobile SDK (ES6, React).

### Bench Accounting

**Director of Engineering** / October 2015 - October 2016 / Vancouver, Canada

**Engineering Lead** / April 2014 - September 2015 / Vancouver, Canada

**Software Engineer** / September 2011 - March 2014 / Omsk, Russia (Remote) -> Vancouver, Canada

Worked on a front-end and UI first year, rewriting multiple single page web apps, then focused more on API, back-end of the core services and integrations. Finally, I was responsible for the whole Platform, including infrastructure work, DevOps tools and practices, core back-end services, integrations, microservices architecture and more.

I always cared a lot about the projects we develop and products we ship. Everything from tiny UI elements to code quality and team motivation. I quickly became a leader for many initiatives and was promoted to the Engineering Lead. As an example, I led the transition from Java monolith app to Scala microservices.

Main projects and achievements included:

- Rewriting front-end apps from tangled jQuery to CoffeeScript, Backbone.js and RequireJS
  - RESTful HTTP API for client and financial data (Scala/Jersey), as well as various APIs for other services and integrations (Scala/Spray)
  - Core financial model design and implementation (Java/Spring, MySQL/Hibernate)
  - Billing/subscriptions functionality via integration with Stripe (Java/Spring)
  - Highly-available J2EE/Tomcat setup with zero-downtime deployment
  - Scala/Akka microservice template, supporting tooling and libraries. Used for 10+ services
  - Realtime eventing infrastructure that powers all notifications and chat messages (Scala/Akka, ActiveMQ/Camel, Postgres, PubNub)
  - Various integrations including Salesforce, Zuora, FileThis, etc. (Scala/Akka)
  - Parsers/scrapers for multiple financial institutions (Scala/Akka)
  - End-to-end testing for the whole system (Selenium/Java and Intern.js/CoffeeScript later)
  - Creating reproducible infrastructure environments for the microservices architecture (Ansible, AWS CloudFormation)
  - Highly-available and auto-scalable set of microservices with zero-downtime deployment, unified monitoring and logging (Docker, AWS Elastic Beanstalk, Ansible, Jenkins, Datadog, Splunk)
- In my role as a Director of Engineering I was responsible for managing multiple teams, working on Platform, infrastructure, API and integrations, as well as participating in technical discussions, contributing to architecture and mentoring (but still hands-on).

## **Purebulk**

**Senior Web Developer** / March 2010 - July 2011 / Omsk, Russia (Remote)

Big e-commerce website (up to 20k+ active users daily), responsibilities included:

- Maintenance and feature development (PHP, MySQL)
- Heavy front-end development using various JavaScript frameworks
- Zencart -> Magento migration

## **Freelance & Digital Agencies**

**Web Developer** / January 2007 - February 2010 / Omsk, Russia

Full-stack (HTML, CSS, JavaScript, PHP, MySQL) web development for various clients.

## **Education**

### **Omsk State Technical University**

2007 - 2012 / Omsk, Russia

Master's Degree (equivalent), Software Engineering and System Analysis.
